Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A video display device comprising:

a display configured to display a primary image and a picture-in-picture image (PIP) overlaying the primary image; and

a processor operatively coupled to the display and configured to receive a first video data stream for the primary image, to receive a second video data stream for the PIP, and to change a PIP display characteristic in response to a received audio ~~command~~ indication and a related gesture from a user, wherein the processor is configured to receive the related gesture from the user in response to the received audio command.

2. (Currently amended) The video display device of Claim 1, wherein the PIP display characteristic is ~~at least one of a position of the PIP on the display and~~ a display size of the PIP.

3. (Currently amended) The video display device of Claim 1, comprising:

a microphone for receiving the audio indication from the user; and

a camera for acquiring an image of the user containing the related gesture, wherein the processor is configured to activate the camera to acquire images in response to the received audio command, and to identify the related gesture from the acquired images.

4. (currently amended) The video display device of Claim 1, wherein the processor is configured to analyze audio information received from the user to identify when a PIP related audio indication is intended by the user, and wherein the processor is configured to receive the related gesture from the user in response to the identified PIP related audio indication.

5. (Currently amended) The video display device of Claim 1, wherein the processor is configured to analyze image information received from the user after in response to the audio indication is received to identify the change in the PIP display characteristic that is expressed by the received gesture.

6. (Original) The video display device of Claim 5, wherein the image information is contained in a sequence of images and wherein

the processor is configured to analyze the sequence of images to determine the received gesture.

7.   (Original) The video display device of Claim 1, wherein the image information is contained in a sequence of images and wherein the processor is configured to determine the received gesture by analyzing the sequence of images and determining a trajectory of a hand of the user.

8.   (Original) The video display device of Claim 1, wherein the processor is configured to determine the received gesture by analyzing an image of the user and determining a posture of a hand of the user.

9.   (Original) The video display device of Claim 1, wherein the video display device is a television.

10.   (Currently amended) The video display device of Claim 1, wherein ~~the image is a sequence of images~~ an image of the user ~~containing~~ contains the user gesture, the video display device comprising a camera for acquiring the ~~sequence of images~~ image of the user.

11.   (Currently amended) A method of controlling a display characteristic of a picture-in-picture display (PIP) overlaying a primary display, the method comprising:

receiving an audio indication from a user;

determining whether the received audio indication is one of a plurality of expected audio indications;

analyzing a gesture of the user ~~if~~ in response to the received audio indication ~~is~~ being one of the plurality of expected audio indications; and

controlling the display characteristic ~~if~~ in response to the gesture ~~is~~ being a gesture related to the received audio indication.

12.   (Original) The method of Claim 11, wherein analyzing the gesture comprises:

receiving a sequence of images; and

analyzing the sequence of images to determine the gesture.

13.   (Original) The method of Claim 11, wherein analyzing the gesture comprises:

receiving a sequence of images;

analyzing the sequence of images to determine a trajectory of a hand of the user; and

determining the gesture by the determined trajectory.

14.   (Original) The method of Claim 11, wherein analyzing the gesture comprises:

analyzing an image of the user to determine a posture of a hand of the user; and

determining the gesture by the determined posture.

15.   (Currently amended) A program segment stored on a processor readable medium for controlling a display characteristic of a picture-in-picture display (PIP) overlaying a primary display, the program segment comprising:

a program segment for controlling receipt of an audio indication;

a program segment for determining whether a received audio indication is one of a plurality of stored audio indications;

a program segment for analyzing a gesture of the user ~~if~~ in response to the received audio indication ~~is~~ being one of the plurality of stored audio indications; and

a program segment for controlling the display characteristic ~~if~~ in response to the gesture ~~is~~ being a gesture related to the received audio indication.

16.   (Currently amended) The program segment of Claim 15, wherein the program segment for analyzing the gesture comprises:

a program segment for controlling receipt of a sequence of images in response to the received audio command; and

a program segment for analyzing the sequence of images to determine the gesture.

17.   (Original) The program segment of Claim 15, wherein the program segment for analyzing the gesture comprises:

a program segment for controlling receipt of a sequence of images;

a program segment for analyzing the sequence of images to determine a trajectory of a hand of the user; and

a program segment for determining the gesture by the determined trajectory.

18.   (Original) The program segment of Claim 15, wherein the program segment for analyzing the gesture comprises:

a program segment for analyzing an image of the user to determine a posture of a hand of the user; and

a program segment for determining the gesture by the determined posture.

19. (Canceled)

20. (Currently amended) A video display device comprising:

a display configured to display a primary image and a picture-in-picture image (PIP); and

a processor operatively coupled to the display and configured to receive a first video data stream for the primary image, to receive a second video data stream for the PIP, and to change a PIP display characteristic in response to a received audio indication and a related gesture from a user, wherein the processor is configured to ~~analyze~~ receive image information ~~received~~ from the user ~~after~~ in response to the audio indication ~~is received to identify the~~ being identified as an audio indication to change ~~in~~ the PIP display characteristic ~~that is expressed by the received gesture~~.

21. (New)   A program segment stored on a processor readable medium for controlling a display characteristic of a picture-in-picture display (PIP) overlaying a primary display, the program segment comprising:

a program segment for determining whether a received audio indication is one of a plurality of stored audio indications;

a program segment for receiving a gesture of the user in

response to the received audio indication being one of the plurality of stored audio indications; and

a program segment for providing an indication to the user in response to the gesture not being identified as a gesture related to the received audio indication.
